Concept: In this strategy they have filtered in away teams that have scored in the previous match or more. This is in the hope that if the away team can get a goal, then it will give more chance for the home team to be forced into attacking for more goals. The home side has been filtered so they have not scored in the previous game. This could lead to value in that some odds calculation models may give higher odds on the over 2.5 result if the home team did not score in their previous match. This is combined with filtering the odds for over 2.5 down to matches with 1.7 and higher. Basically ruling out the very low odds matches. The match odds have filtered out games with draw odds lower than 3.5. In this way it gets its title of games where the draw is not expected. It is probable from these filters that we then have an away team with their scoring boots on and a home team with a point to prove since they drew blank in their last outing. All of these filters together make a healthy 279 point profit over three years. 12.43% yield is high, too. The win rate of 58% will be easy on banks and the max drawdown of 24.4 is easily manageable in any 100 point bank where each bet is 1 point. You could even get away with 2 points on each bet.

Strategy Filters

Date Range: 01/01/2015 - 31/03/2018	Leagues: FRA Ligue 1, BEL Jupiler League, ENG League One, ENG Premier League, FRA National, ITA Serie A, POL Ekstraklasa, TUR Super Lig ...		
Consecutive games scored > 0 Goals. Away Team (overall): 1 - 10	Consecutive games NOT scored > 0 Goals. Home Team (overall): 1 - 5		
Odds Draw (X): 3.5 - 1000	Odds Over 2.5 goals: 1.7 - 1000	Market Type: Over / Under 2.5 goals	Bet Type: Over 2.5 goals

Base data for backing over 2.5 goals in all matches without strategy filters.

53801 Total Bets	48 % % Bet Won	52 % % Bet Lost	5/5 W / L Streak	2.09 Avg. Odds	-1542.71 Max Drawdown	-1514.13 P & L	-2.81 % Yield %
---------------------	-------------------	--------------------	---------------------	-------------------	--------------------------	-------------------	--------------------

Results for all leagues with strategy filters.

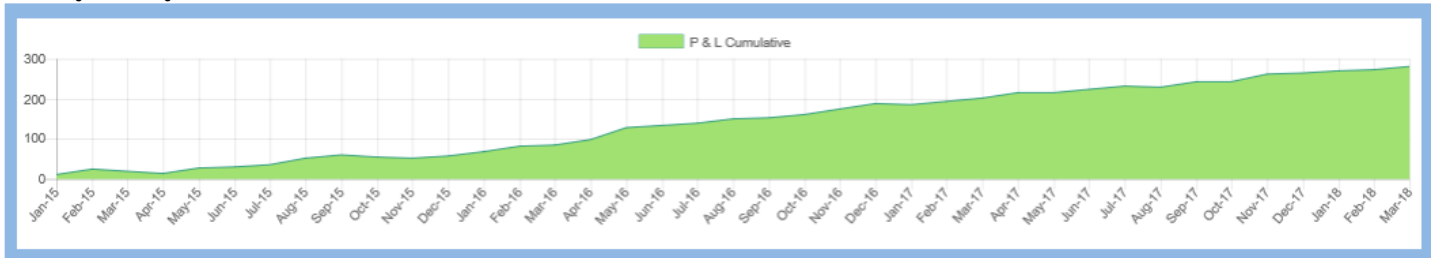

4410 Total Bets	52 % % Bet Won	48 % % Bet Lost	3/7 W / L Streak	1.95 Avg. Odds	-68.69 Max Drawdown	+55.34 P & L	+1.25 % Yield %
--------------------	-------------------	--------------------	---------------------	-------------------	------------------------	-----------------	--------------------

Results for selected leagues with strategy filters.

2250 Total Bets	58 % % Bet Won	42 % % Bet Lost	3/7 W / L Streak	1.95 Avg. Odds	-24.40 Max Drawdown	+279.60 P & L	+12.43 % Yield %
--------------------	-------------------	--------------------	---------------------	-------------------	------------------------	------------------	---------------------

We can see that even if we did not filter leagues and used this strategy with all leagues, we would still make a profit. That is a good sign. Filtering the leagues enables us to get a better yield and reduce our drawdown.

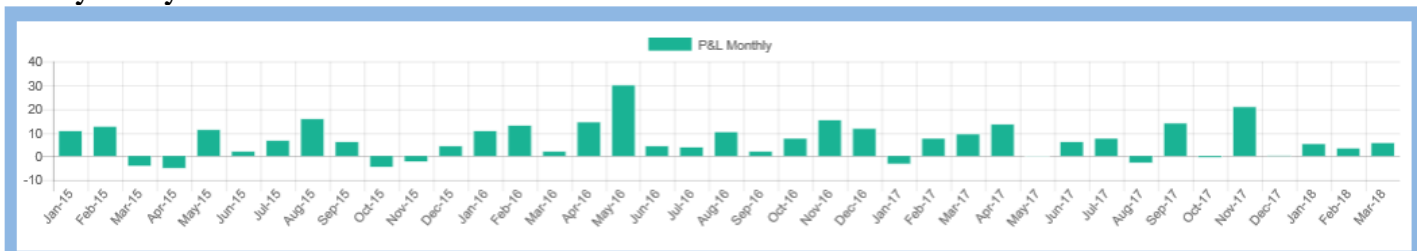

Analysis by Year

System	Year	Total Bets	% Bets Won	Average Odds	Maximum Drawdown	Profit & Loss	Yield %	Winning months
BP1 Over 2.5 Draw not expected	2015	733	55%	1.97	-24.40	56.29	7.68%	8
	2016	682	61%	1.96	-9.57	131.31	19.25%	12
	2017	727	57%	1.92	-11.46	75.98	10.45%	8
3 Year Total 2015-2017		2142	58%	1.95	-24.40	263.58	12.31%	28
Monthly average		60				7		78%
Annual average		714				88		100%

Interestingly, this strategy is based on three years of data and not the full six years of data. If we check the six years of data by editing the strategy ourselves we will see that there was not much profit in the first three years, but the strategy suddenly jumps into life from 2015. Reasons for this may be changes in the odds calculation method at Pinnacle or it could be the nature of the leagues being bet on had some changes. It may seem like an alarm bell when the unsuccessful years have been left out, but looking at the annual results since 2015, the results are strong and consistent. A win range of 55-61%, not one losing month in 2016, 28 of 36 months were profitable. That gives a 78% chance of profit each month. I like this strategy very much and you can see my adapted version of it as “Strategy 6 Scoring Away Overs” in the Colossus21 system where I include the data from six years, exclude leagues with under 4% yield, and still have healthy profits.

Analysis by Month

BP1	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sept	Oct	Nov	Dec	Total
2015	11.00	13.00	-4.23	-5.31	11.84	2.49	6.92	16.29	6.65	-4.90	-2.34	4.78	56.29
2016	11.37	13.60	2.53	14.94	30.20	4.90	4.51	10.84	2.55	7.79	15.83	12.25	131.31
2017	-3.27	7.85	9.84	14.16	0.00	6.72	8.14	-2.82	14.45	-0.62	21.19	0.56	75.98
Totals	19.10	34.45	8.14	23.79	42.04	14.11	19.57	24.31	23.65	2.27	34.68	17.59	263.58
Average	6.37	11.48	2.71	7.93	14.01	4.70	6.52	8.10	7.88	0.76	11.56	5.86	87.90

The monthly results show no more than two losing months in a row and no losing months bigger than 5.31 points. The biggest win was 30.2 points. We have a range of -5.3 to +30.2 and a monthly average of +7 points profit from 60 bets. This strategies picks are free from Betaminic now, so it is a great opportunity to try out Betaminic and see how it works. If you like it, you can try the other Betaminic strategies later just by clicking on them and buying picks, or use the Colossus21 system.

(Data from 2018/3/19)

The Polish Division 1 is excluded even though it is making profit. This is probably because at the time of initially researching this strategy, the Polish Division 1 was not in profit, so it was left out. Over time it has moved into profit, but Betaminic have left the strategy as it is for now. Another decision you will need to make is when and how often to review your strategies.

Overall this is a great strategy to start with and it is free to use, so you should sign up and start using this one as soon as possible. It has a low maximum drawdown, consistent profits and few losing months which are not big losses.
